

AI Resume Analysis Report

Candidate: VIJAYA LAXMI RUHELA

Date Generated: 12-06-2026 17:30

Performance Summary

Resume Match Score: 35.95%

ATS Score: 39.43/100

Matching Skills

- Pandas
- Flask
- Recommendation Systems
- GitHub
- NumPy
- Machine Learning
- Streamlit
- Python

Missing Skills

- Docker
- Data Analysis
- Deep Learning
- Git
- NLP
- AWS
- SQL

AI Resume Feedback

- Add a SQL-based project to strengthen your database skills.
- Learn AWS Cloud Practitioner and add a cloud project.
- Learn Docker fundamentals and containerization.
- Build an NLP project using Python.
- Add a Deep Learning project using TensorFlow or PyTorch.
- Work on a Data Analysis project using Pandas and NumPy.

Interview Questions

1. What are Python decorators?
2. Difference between List and Tuple?
3. What is a Lambda Function?
4. What is Overfitting?
5. Difference between Supervised and Unsupervised Learning?
6. What is Cross Validation?

Groq AI Analysis

Based on the provided resume and job description, here's an analysis:

1. Strengths:

- The candidate has a strong educational background in Computer Science and Engineering with a specialization in Artificial Intelligence and Machine Learning, which aligns well with the job requirements.
- They have hands-on experience with Python, machine learning, and data analysis, as evident from their projects, such as the AI-Powered Movie Recommendation System and the Interactive Music Streaming & Voting Platform.
- The candidate has experience with tools and technologies like Pandas, NumPy, Scikit-learn, and Streamlit, which are required for the job.
- They have a good grasp of recommendation systems, as demonstrated by their projects, which is a nice-to-have skill for the job.
- The candidate has certifications in relevant areas like Introduction to Artificial Intelligence, Data Mining with Python, and Python for Data Science, showcasing their eagerness to learn and grow.

2. Weaknesses:

- The candidate lacks direct professional experience as a Python Developer, with most of their experience coming from personal and academic projects.
- Although they have worked with SQL databases in their projects, it's not explicitly mentioned in their skills section, which might raise concerns about their proficiency in this area.
- There's no mention of experience with Docker, AWS, or deep learning frameworks, which are preferred skills for the job.
- While they have worked with Flask, it's not highlighted as a skill, and there's no mention of experience with REST APIs.

3. Missing Skills:

- SQL (although they might have experience with it, it's not clearly stated in their skills section)
- Git (mentioned in their experience with GitHub, but not explicitly listed as a skill)
- Docker
- AWS
- Deep Learning frameworks
- NLP
- Experience with REST APIs

4. Suggestions:

- Highlight transferable skills: Even though the candidate lacks direct professional experience, they should emphasize the skills they've developed through their projects and academic work that are relevant to the job.
- Acquire missing skills: The candidate should consider taking courses or working on projects that involve Docker, AWS, deep learning frameworks, and NLP to enhance their chances of getting selected.
- Emphasize SQL proficiency: If the candidate has worked with SQL databases, they should explicitly mention it in their skills section to avoid any confusion.
- Build a stronger online presence: The candidate should ensure their LinkedIn and GitHub profiles are up-to-date and showcase their skills and projects in a clear and concise manner.
- Prepare for common Python and machine learning interview questions: The candidate should practice answering common interview questions related to Python, machine learning, and data analysis to increase their confidence and preparedness for the interview.
