

AI Resume Analysis Report

Candidate: VIJAYA LAXMI RUHELA

Date Generated: 17-06-2026 00:09

Performance Summary

Resume Match Score: 43.81%

ATS Score: 50.34/100

Matching Skills

- API Integration
- Pandas
- Git
- Data Preprocessing
- Scikit-learn
- Python
- NumPy
- Feature Engineering
- Recommendation Systems
- GitHub
- Machine Learning
- NLP
- Streamlit

Missing Skills

- PyTorch
- Deep Learning
- SQL
- TensorFlow

AI Resume Feedback

- Add a SQL-based project to strengthen your database skills.
- Add a Deep Learning project using TensorFlow or PyTorch.

Interview Questions

1. What are Python decorators?
2. Difference between List and Tuple?
3. What is a Lambda Function?
4. What is Overfitting?
5. Difference between Supervised and Unsupervised Learning?
6. What is Cross Validation?
7. What is Tokenization?
8. What is Stemming?
9. What is TF-IDF?

Groq AI Analysis

Analysis of the Resume against the Job Description

1. Strengths

- Relevant project experience: The candidate has worked on multiple projects that involve machine learning, natural language processing, and recommendation systems, which are crucial for the AI/ML Engineer Intern position.
- Technical skills: The candidate has a strong foundation in programming languages such as Python, C, C++, and Java, and is familiar with tools and technologies like NumPy, Pandas, Scikit-learn, and Streamlit, which are required for the job.
- Certifications and education: The candidate is pursuing a B.Tech in Computer Science and Engineering with a focus on Artificial Intelligence and Machine Learning, and has various certifications in AI, NLP, and data science, demonstrating a commitment to learning and professional development.
- Personal projects: The candidate has developed personal projects, such as the AI Resume Analyzer & Job Matcher and the AI-Powered Movie Recommendation System, which showcase their ability to apply machine learning concepts to real-world problems.

2. Weaknesses

- Limited depth in certain areas: While the candidate has a broad range of skills and experiences, the depth of knowledge in areas like deep learning (TensorFlow or PyTorch) might be limited based on the provided information.
- Lack of professional experience: The candidate appears to be a student with no direct professional experience in the field, which could be a challenge in terms of adapting to a professional work environment.
- SQL skills: Although the candidate mentions working with databases in projects, explicit mention of SQL skills is missing, which is a required skill for the position.

3. Missing Skills

- Deep learning frameworks: Experience with deep learning frameworks like TensorFlow or PyTorch is preferred but not mentioned in the resume.
- SQL: While the candidate has worked with SQLite in a project, explicit proficiency in SQL is not highlighted.
- Statistics: Although the candidate has worked on projects involving data analysis, a strong background in statistics, which is crucial for machine learning, is not explicitly mentioned.

4. Suggestions

- Gain deeper experience in deep learning: The candidate should consider taking courses or working on projects that involve TensorFlow or PyTorch to strengthen their deep learning skills.
- Highlight SQL skills: Even if the experience is from academic projects, highlighting SQL skills explicitly in the resume can be beneficial.
- Emphasize statistical knowledge: Since statistics is a foundational aspect of machine learning, the candidate should ensure that their understanding and application of statistical concepts are evident in their projects or certifications.
- Prepare for a professional environment: The candidate should be ready to adapt to a professional work setting, which may involve more structured workflows, collaboration tools, and potentially more complex projects than academic or personal endeavors.
